The purpose of this amendment is to incorporate revisions to solicitation DE-SOL-0000872 as described below:

Section C

- 1. C.11.1 Environmental Characterization Services, first paragraph is hereby amended as follows:**

FROM:

Services required under this contract include: comprehensive environmental task-based characterization services, including but not limited to: work plan development and documentation, field data collection and sample analyses, civil survey support, non-intrusive geophysical data collection, buried infrastructure identification and mapping, data management, data validation, data reduction, interpretation, and presentation, statistics, geographic information system products, field summary reports, data summary reports (i.e., summary of data verification, validation, and assessment), and technical oversight of field investigation activities. Onsite activities will include subsurface field services (e.g., well drilling, soil borings, cone penetrometer testing, geotechnical data collection and related services) as well as surface soil, groundwater, surface water, and stream sediment characterization. Non-intrusive and field screening capabilities may be required (e.g., gamma walkover surveys, down-hole gamma surveys, non-intrusive geophysical surveys, etc.). In addition, routine site-wide monitoring activities may be required, including but not limited to air, surface water, groundwater, sediment, soil, direct exposure, and biota monitoring. Investigation-derived waste (IDW) management and disposition will also be included. As part of characterization activities, the contractor should be prepared to deploy and support in-field laboratory capabilities (radiological and chemical) as required and appropriate. The contractor should be familiar with the Triad approach to environmental characterization and capable of implementing Triad-based data collection efforts. The contractor should be familiar with Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM) guidance and experienced with implementing final status surveys for demonstrating site closure. Consequently the contractor should have the capacity to manage and disseminate data results electronically while in the field to support in-field decision-making, as appropriate.
